London, UK | +44 7548 238672 | edafeoj@gmail.com | linkedin.com/in/matthew-oj | github.com/Matthew-Oj | matthew-oj.github.io/

SKILLS

Languages: Python, SQL, TypeScript, JavaScript, PHP, HTML, CSS, Bash | Familiar: C++, C#

Frameworks: FastAPI, React, Next.js, Astro, Tailwind CSS, Laravel, Streamlit, NiceGUI, pytest

Tools & Cloud: AWS (Lambda, EC2, S3, Aurora RDS, DynamoDB), GCP (Cloud Run, BigQuery, Cloud Composer, Vertex AI), Docker, Vercel, Git, GitHub Actions, CI/CD, Linux, PostgreSQL, Redis, Kafka, Snowflake, dbt, Apache Airflow, REST APIs, OAuth, JWT

EXPERIENCE

Vafo Digital **London, UK**

Senior Data Engineer (Backend Infrastructure) | Python, FastAPI, AWS, Docker, Next.js, TypeScript Apr 2026 – present

- Re-architected 200+ pipelines from scattered PHP, Lambda and Snowflake scripts onto Dockerised AWS EC2 with separate staging and prod environments, each with its own Aurora RDS database and IAM access, so every job is deployed, tested and monitored in one place
- Migrating client analytics apps from Streamlit to Next.js, TypeScript and Tailwind on Vercel, giving each client an isolated, hosted app
- Developed a shared Python library used by 30+ services, standardising error handling and logging so failures are traced and fixed the same way
- Created an HTML, CSS and JavaScript portal on AWS Amplify for 10 dbt projects, auto-published via GitHub Actions for non-technical teams

Data Engineer | Python, FastAPI, AWS Lambda, Snowflake, Streamlit, PHP/Laravel Apr 2025 – Apr 2026

- Architected a reporting service in FastAPI on AWS Lambda, automating scheduled report delivery to 10+ client accounts, replacing manual report requests
- Synced customer data to HubSpot and Klaviyo via event-driven, serverless AWS Lambda functions for 10K–800K users per client
- Designed an MCP server giving Snowflake Cortex AI least-privilege, read-only data access to power personalised ads
- Delivered 3 client-facing analytics web apps in Python and Streamlit on Snowflake, querying event tables of 200M+ rows

Maison Privé Concierge Limited **Remote**

Software Engineer (Freelance) | TypeScript, Astro, Tailwind, Airtable, Google Drive, Vercel | Link Apr 2026 – Jun 2026

- Co-developed a luxury concierge website in TypeScript, Astro, HTML and CSS (Tailwind), deployed on Vercel, giving the client a live site to take bookings
- Integrated Mailgun, Google Drive and Airtable with retries, idempotency checks and end-to-end tests, so no enquiry was ever lost or duplicated
- Engineered an enquiry form with per-service schemas, strict validation and spam filtering, blocking 95%+ of bot submissions

EssenceMediacom **London, UK**

Data Engineering Executive | Python, GCP, Cloud Run, BigQuery, Airflow, GitHub Actions Nov 2023 – Apr 2025

- Developed a full-stack Python app (NiceGUI, Redis, BigQuery, OAuth) for data-maturity assessments across 5 WPP agencies
- Built a Streamlit tool on Cloud Run auto-generating Adverity table schemas, cutting pipeline build time by 30%
- Automated Airflow deploys with GitHub Actions CI/CD, syncing only changed DAGs and cutting deploy time by 40%
- Created a low-latency REST API alerting service on Cloud Run, emailing teams about Adverity failures within seconds

University of Greenwich **London, UK**

IT Analyst | HTML, CSS, Azure, Microsoft Entra ID Jan 2021 – Oct 2023

- Built static HTML and CSS pages for helpline scripts and common requests, so staff resolved frequent issues faster
- Resolved 20–30 support tickets a day, including MFA and identity resets in Microsoft Entra ID (Azure AD)

PROJECTS

Finance Tracker | FastAPI, dbt, PostgreSQL, Next.js, Docker | Link

- Built a full-stack finance app with a JWT-secured FastAPI API, dbt models in PostgreSQL and a Next.js dashboard
- Wrote 13 pytest unit tests for auth, endpoints and pagination against a mocked database, containerised with Docker Compose

Event-Driven Notification Service | Python, FastAPI, Kafka, aiokafka, PostgreSQL, Docker | Link

- Built an async service consuming Kafka events, using idempotent PostgreSQL upserts for at-least-once delivery
- Added retries and a dead-letter queue for failed messages, exposing notification status via a FastAPI API

ACTIVITIES

WPP & Google Cloud Hackathon (3rd Place) | Python, Cloud Run, Vertex AI, BigQuery, Streamlit Sep 2024

- Built a Cloud Run service turning live BigQuery data into Vertex AI prompts to generate ad creatives via a Streamlit UI

Engineers Without Borders | Project Lead Engineer | MATLAB, SolidWorks Sep 2020 – May 2021

- Led 5 engineers designing a solar cooker prototype, using a MATLAB optimiser to improve thermal efficiency by 20%

EDUCATION

University of Greenwich Sep 2020 – May 2023

Bachelor of Engineering, Civil Engineering, 2.1 Upper Second-Class Honours London, UK

Dissertation (First Class): Assessing the vulnerability of catchments during flash flood events in South England using Machine Learning methods
